REDUCED BACK PAIN, IMPROVED ALERTNESS

The BackCycler® system utilizes Continuous Passive Motion (CPM) to slowly inflate and deflate an extra air bladder within the lumbar region of the seat. This cyclical, in-and-out motion gently flexes the spine, which promotes blood flow, reduces fatigue, and helps keep muscles & ligaments from tightening during long periods of sitting.

HELPING YOU FIGHT BACK PAIN AND THE FATIGUE IT CAUSES

We all know that pain and fatigue lead to downtime, lost efficiency, and reduced margin of safety. The BackCycler® is not a simple vibrating massage gizmo, rather it is a active air powered device which helps your body remain loose and reduce the pain caused from sitting in one position for an extended period of time.

It isn't just about feeling good, it is about the bottom line...

PAIN RELIEF

The BackCycler® was developed from 10 years of research with the University of Vermont and funded by the National Institute of Disability and Rehabilitation Research. Today many fleets will only purchase vehicles with BackCycler® as a standard feature on their new trucks.
